

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 13, line 3 and ending at line 10, with the following rewritten paragraph:

As is best shown in the exploded view of Fig. 10, apparatus 20 includes a second rupture disc 122 which is of identical shape and overall dimensions disc 22, but preferably is constructed of somewhat thicker stainless steel material. Furthermore, an annular clamping member 262 is provided against the underside or innermost side of disc 122. The bulged portion of the central section 130 of disc 122 has a line of weakness 50, which preferably has the same number of slits 152 as slits 52 of line of weakness 50 of disc 22. Furthermore, the slits 152 of line of weakness 150 of disc 122 align with and are of same length as respective slits 52 of line of weakness 50 in rupture disc 22.
